Chrysanthemums

GROWN AND FOR SALE BY

SHADYCOVE ACRES

G. M. Clark and J. D. Clark

Issaquah, Washington

TO OUR PATRONS:

We are presenting our catalog for this year and probably it will have to do for the year following as it is no small expense to issue such a list. We are asking that it be filed away so that a supplement will be sufficient for the year following. We want to thank our customers for the fine patronage in the past. We are hoping for another year that will be just as good.

The heights and dates of maturity given are based on average growing conditions for May and June planting. These dates vary in different localities and with varying soil and climatic conditions. Our plants are available from late April, thru May and into early June. We could have them earlier but plants started too early have a tendency to get leggy before the real season for planting is at hand.

TERMS OF SALE

Cash with order unless the plants are called for here. No plants are sent collect. Due to postage and packing, no order for less than three plants is accepted unless allowance for postage is made. No charge is made for packing and postage within the first four zones. A flat charge of 25c will be accepted in lieu of postage for points beyond the Rocky Mountains. Claims for damages must be assumed by the buyer and entered by the buyer against the carrier.

NON-WARRANTY

We make every effort to keep plants true to name and to supply good plants. We pack carefully and use utmost care in filling orders. We can give no warranty, expressed or implied, and can not guarantee or be in any way responsible for the crop either as to variety or the product. All orders will be filled on these conditions and must be so accepted by the customer. However, we will replace improperly named varieties in a later order if we have ample notice from the customer. In spite of the greatest care mistakes will creep in and we are willing to do our part to correct them.

SALES TAX

We must report our sales to the State Tax Commission and make our remittance accordingly. Hence, be sure to include the 3% sales tax on all orders within this state.

LOCATION

For the convenience of those who care to call at our gardens, we are describing our location. SHADYCOVE ACRES is at the southwest corner of Lake Sammamish. It is on the lower road of the Floating Bridge Highway. We have three parallel roads above us, Leave the four-lane highway at Carlson's Corner and take the lower road, the one nearer the lake. Drive south toward Issaquah. Our larger greenhouse stands near the highway at which there is a sign. Our house is a low bungalow with a red roof. We are some three miles northwest from Issaquah. You can not miss us if you take the lower road.

PRICES

Due to the cost of supplies and of labor we are compelled to advance our prices of former years. The plants are 35c each or \$4.00 a dozen with no extra charge for packing and postage. If we are allowed to make the selection of the varieties, we will put in fifteen of the English or Early Flowering varieties at the dozen rate.

Early Flowering Chrysanthemums for the Garden

ORDERING

We seem to have a good supply of stock plants but we always run short on some varieties. If you do not want us to substitute when we run short, mark your order "No Substitutes". If we have to substitute we will use kinds similar to the ones ordered. It is no small task to return money when filling orders, so we ask that a few substitutes or second choice kinds be named with your order. This will enable us to fill the order without making refunds. We have over four hundred different varieties either named in the catalog or not named. If you name a substitute, then we do not send kinds that you already have.

Orders are filled in the order received. Hence ORDER EARLY.

CULTURAL DIRECTIONS

In preparing the soil, it is necessary to have ground dug deeply. Manure is applied in the fall before, or as early as possible in the spring. Planting time is from late April on, but not too early as the plants are grown in the green house and are not hardy enough to stand frost or too much cold weather. Plant firmly but not too deep, about the depth they have been in the beds. Give plenty of water at all times. Do not plant closer than fifteen inches for outdoors.

The method of stopping and disbudding varies according to the purpose which the grower requires, whether for garden decoration or for exhibition. As a general rule, plants should be pinched back to within five or six inches from the ground as soon as they are established and start growing. This will make them branch out and from one to six branches may be retained depending upon object in view. Too many branches produce smaller but more flowers. If working for exhibition blooms or larger blooms disbud to one or more buds. The second crown bud is generally preferred. The break bud is removed as the plant will send up so many branches that the flower will not be perfect.

Stake, tie up, spray and cultivate often. Shallow cultivation is the best as the roots grow near the surface of the ground. Fertilize often with good commercial fertilizer or weak liquid manure. Bone meal and superphosphate, say a tablespoonful, may be used before planting.

If ground is not well drained, it is advisable to dig the plants in the fall and store in a dry protected place for the winter. A basement is a poor place to store them. Use water sparingly until you want them to start in the spring. Divide the clumps to about one shoot and plant. Or root the cuttings in sand with under heat if possible.

ENGLISH and EARLY FLOWERING CHRYSANTHEMUMS

Date of flowering, height, etc., are approximate

ADORATION—Creamy with pink shadings. A real beauty, 3 ft.....Sep.
ALABASTER—An early white; Firm flower 5-in. across; slightly inc., 2½.....Sep.
